

# Park Hill School District

Building Successful Futures • Each Student • Every Day

## 6<sup>th</sup> Grade Mathematics Curriculum

**Course Description:** In grade 6, instructional time will focus on four critical areas: (1) completing understanding of division of fractions and extending the notion of number to the system of rational numbers, which includes negative numbers; (2) writing, interpreting, and using expressions and equations; (3) connecting ratio and rate to whole number multiplication and division and using concepts of ratio and rate to solve problems; and (4) developing understanding of statistical thinking

### Scope and Sequence:

Time Frame	Unit
7 blocks	Numerical Expressions and Factors
8 blocks	Fraction and Decimals
11 blocks	Ratios and Rates
7 blocks	Percents
8 blocks	Algebraic Expressions and Properties
7 blocks	Equations
8 blocks	Area, Surface Area, and Volume
11 blocks	Integers, Number Lines, and the Coordinate Plane
6 blocks	Statistical Measures
7 blocks	Data Displays

Red units indicate the majority or entire unit is made up of supporting standards.

# Unit 1: Numerical Expressions and Factors

**Subject:** Mathematics

**Grade:** 6th grade

**Name of Unit:** Numerical Expressions and Factors

**Length of Unit:** 7 blocks

**Overview of Unit:** Chapter 1 includes the order of operations, which is an essential understanding for work in mathematics. The inclusion of exponents as they evaluate expressions is new to students. Some of the problems in the lessons integrate prior work with fractions and decimals. If students are not confident in these operations, you may need to review these prior skills. Number theory concepts are presented in the second part of the chapter. Students should be familiar with prime and composite numbers, and know the difference between factors and multiples. A factor tree is introduced as a tool for finding the prime factorization of a number. Prime factorizations will be used to find the greatest common factor (GCF) and least common multiple (LCM) of two numbers. Contextual applications of the GCF and the LCM will also be explored in this chapter.

## Priority Standards for unit:

- 6.EE1.A.1 Describe the difference between an expression and an equation.
- 6.EE1.A.2 Create and evaluate expressions involving variables and whole number exponents.
  - b. Evaluate expressions at specific values of the variables.
  - c. Evaluate non-negative rational number expressions

## Supporting Standards for unit:

- ISTE-COMPUTATIONAL THINKER. 5: Students develop and employ strategies for understanding and solving problems in ways that leverage the power of technological methods to develop and test solutions.
- 6.NS.B.4 Find common factors and multiples.
  - a. Find the greatest common factor (gcf) and the least common multiple (lcm).
  - b. Use the distributive property to express the sum of two whole numbers with a common factor as a multiple of two whole numbers.

Priority Standard	Unwrapped Concepts (Students need to know)	Unwrapped Skills (Students need to be able to do)	Bloom's Taxonomy Levels	Webb's DOK
6.EE1.A.1	The expectation of the student is to describe the difference between an expression and an equation.	Describe	Knowledge	1
6.EE1.A.2	Create and evaluate expressions involving variables and whole number exponents.	Create	Create	4
6.EE1.A.2b	Evaluate expressions at specific values of the variable	Evaluate	Evaluate	4

6.EEIA.2c	Evaluate non-negative rational number expressions.	Evaluate	Evaluate	4
-----------	--	----------	----------	---

**Essential Questions:**

1. How do exponents allow you to communicate more precisely to others?
2. How can you use Algebraic Expressions to make decisions?
3. What is prime factorization and how is it helpful?

**Enduring Understanding/Big Ideas:**

1. Exponents are shorthand notations that allow you to write expressions containing repeated multiplication more efficiently and precisely.
2. Evaluating Algebraic expressions allows you to compare situations and make decisions using replacement values that make sense in a real world situation.
3. The prime factorization of a composite number is the number written as the product of its prime factors. Using prime factorization will more quickly allow you to find the LCM or GCF of a set of numbers.

**Unit Vocabulary:**

Academic Cross-Curricular Words	Content/Domain Specific
Equivalent Expression Evaluate Power Product Venn Diagram	Base Common Factors Common Multiples Composition Exponent Factor Pair Factor Tree Greatest Common Factor Least Common Multiples Numerical Expression Order of Operations Ordered Pair Perfect Squares Prime Prime Factorization

## Big Ideas Chapter 1: Numerical Expressions and Factors

Standard	Topic & Section	Suggested # of Days	Learning Target	Success Criteria
6.EE1.A.1	1.1 Powers and Exponents	1 block	Write and evaluate expressions involving exponents.	<ol style="list-style-type: none"> <li>1. Write products of repeated factors as powers.</li> <li>2. Evaluate powers.</li> </ol>
6.EE1.A.2c ISTE 5d	1.2 Order of Operations	1 block	Write and evaluate numerical expressions using the order of operations.	<ol style="list-style-type: none"> <li>1. Explain why there is a need for a standard order of operations.</li> <li>2. Evaluate numerical expressions involving several operations, exponents, and grouping symbols.</li> <li>3. Write numerical expressions involving exponents to represent a real-life problem.</li> </ol>
6.NS.B.4	1.3 Prime Factorization	½ block	Write a number as a product of prime factors and represent the product using exponents.	<ol style="list-style-type: none"> <li>1. Find factor pairs of a number.</li> <li>2. Explain the meanings of prime and composite numbers</li> <li>3. Create a factor tree to find the prime factors of a number.</li> <li>4. Write the prime factorization of a number.</li> </ol>

6.NS.B.4	1.4 Greatest Common Factor	1 block	Find the greatest common factor of two numbers	<ol style="list-style-type: none"> <li>1. Explain the meaning of factors of a number.</li> <li>2. Use lists of factors to identify the greatest common factor of numbers.</li> <li>3. Use prime factors to identify the greatest common factor of numbers.</li> </ol>
6.NS.B.4	1.5 Least Common Multiple	1 block	Find the least common multiple of two numbers	<ol style="list-style-type: none"> <li>1. Explain the meaning of multiples of a number.</li> <li>2. Use list of multiples to identify the least common multiple of numbers.</li> <li>3. Use prime factors to identify the least common multiple of numbers.</li> </ol>

## Unit 2: Fractions and Decimals

**Subject:** Mathematics

**Grade:** 6<sup>th</sup> Grade

**Name of Unit:** Fractions and Decimals

**Length of Unit:** 8 blocks

**Overview of Unit:** By the end of this course, all students should be proficient in adding, subtracting, multiplying, and dividing fractions, including mixed numbers, and decimals. Students were introduced to some of these concepts in prior courses, now the remaining work will be completed in this course. This is the last opportunity that students will have to make sense of these computations. In future courses, the operations will be performed on rational numbers. The explorations and visual models used throughout the chapter will enable students to develop the conceptual understanding necessary for making sense of the algorithms.

Students should understand that the meaning of each operation with fractions and decimals is the same as the meaning for whole numbers. Understanding this, and using visual representations, is essential to student success with these concepts.

Decimal operations were introduced in the prior course, but fluency is expected by the need of this course. Understanding place value, how to write decimals as fractions, and models that represent decimals are prerequisite skills.

Students need to estimate and recognize patterns to understand where to place the decimal point in the answer. These ideas will be investigated prior to introducing an algorithm.

### **Priority Standards for unit:**

- 6.NS.A.1 Compute and interpret quotients of positive fractions
  - Solve problems involving division of fractions by fractions.
- 6.NS.B.3 Demonstrate fluency with addition, subtraction, multiplication and division of decimals.

### **Supporting Standards for unit:**

- 5.NF.B.6 Solve real world problems involving multiplication of fractions and mixed numbers, e.g., by using visual fraction models or equations to represent the problem.
- 6.NS.B.3 The expectation for the student is to demonstrate fluency with addition, subtraction, multiplication and division of decimals. (*Fluency refers to accuracy and efficiency and does not equate to memorization.*)

<b>Priority Standard</b>	<b>Unwrapped Concepts (Students need to know)</b>	<b>Unwrapped Skills (Students need to be able to do)</b>	<b>Bloom's Taxonomy Levels</b>	<b>Webb's DOK</b>
6.NS.A.1	Compute and interpret quotients of positive fractions	Compute	Apply	3
6.NS.A.1	Compute and interpret quotients of positive fractions	Interpret	Understand	2
6.NS.B.3	Demonstrate fluency with addition, subtraction, multiplication, and division of decimals	Demonstrate	Apply	3

**Essential Questions:**

1. How is dividing by a fraction like dividing by a whole number and how is it different?
2. How can the meaning of division be extended from whole numbers to fractions?
3. How can you extend the use of place value with whole number operations to decimal operations?

**Enduring Understanding/Big Ideas:**

1. You can use a number line model to show division of whole numbers or division of fractions: when you divide whole number, the quotient is always less than (or equal to) the dividend: when you divide fractions, the quotient can be greater than the dividend
2. When you divide whole numbers, the quotient is always less than or equal to the dividend. When you divide fractions, the quotient can be greater than the dividend.
3. Adding decimals is like adding whole numbers; in both situations you line up place values before you start. Multiplying decimals is like multiplying whole numbers, but you have to count up the number of decimal places in the factors and use that sum to place the decimal point in the product. Dividing decimals is like dividing whole numbers but if there is a decimal point in the divisor you have to multiply the divisor and the dividend by a power of ten before you start.

**Unit Vocabulary:**

## Big Ideas Chapter 2: Fractions and Decimals

Standard	Topic & Section	Suggested # of Days	Learning Target	Success Criteria
5.NF.B.6	2.1 Multiplying Fractions	1 block	Find products involving fractions and mixed numbers.	<ol style="list-style-type: none"> <li>1. Draw a model to explain fraction multiplication.</li> <li>2. Multiply fractions</li> <li>3. Find products involving mixed numbers.</li> <li>4. Interpret products involving fractions and mixed numbers to solve real-life problems.</li> </ol>
6.NS.A.1 ISTE 5a	2.2 Dividing Fractions	2 Blocks	Compute quotients of fractions and solve problems involving division by fractions.	<ol style="list-style-type: none"> <li>1. Draw a model to explain division of fractions.</li> <li>2. Find reciprocals of numbers.</li> <li>3. Divide fractions by fractions.</li> <li>4. Divide fractions and whole numbers.</li> </ol>
6.NS.A.1	2.3 Dividing Mixed Numbers	1 Block	Compute quotients with mixed numbers and solve problems involving division with mixed numbers.	<ol style="list-style-type: none"> <li>1. Draw a model to explain division of mixed numbers.</li> <li>2. Write a mixed number as an improper fraction.</li> <li>3. Divide with mixed numbers.</li> <li>4. Evaluate expressions involving mixed numbers using the order of operations.</li> </ol>
6.NS.B.3	2.4 Adding and Subtracting Decimals	1 Block	Add and subtract decimals and solve problems involving addition and	<ol style="list-style-type: none"> <li>1. Explain why it is necessary to line up the decimal points when</li> </ol>

			subtraction of decimals.	<p>adding and subtracting decimals.</p> <ol style="list-style-type: none"> <li>Add decimals.</li> <li>Subtract decimals</li> <li>Evaluate expressions involving addition and subtraction of decimals.</li> </ol>
6.NS.B.3 ISTE 5.a	2.5 Multiplying Decimals	1 Block	Multiply decimals and solve problems involving multiplication of decimals.	<ol style="list-style-type: none"> <li>Multiply decimals by whole numbers.</li> <li>Multiply decimals by decimals.</li> <li>Evaluate expressions involving multiplication of decimals.</li> </ol>
6.NS.B.3	2.6 Dividing Whole Numbers	1 Block	Divide whole numbers and solve problems involving division of whole numbers.	<ol style="list-style-type: none"> <li>Use long division to divide whole numbers.</li> <li>Write a remainder as a fraction.</li> <li>Interpret quotients in real-life problems.</li> </ol>
6.NS.B.3 ISTE 5.a	2.7 Dividing Decimals	1 Block	Divide decimals and solve problems involving division of decimals.	<ol style="list-style-type: none"> <li>Divide decimals by whole numbers.</li> <li>Divide decimals by decimals.</li> <li>Divide whole numbers by decimals.</li> </ol>

## Unit 3: Ratios and Rates

**Subject:** Mathematics

**Grade:** 6<sup>th</sup> Grade

**Name of Unit:** Ratios and Rates

**Length of Unit:** 11 blocks

**Overview of Unit:** This unit begins with introductory skills associated with writing and representing ratios. Fractional notation is purposely avoided. Instead, the number  $a/b$  is referred to as the value of the ratio  $a:b$ . Once the concept of a ratio has been introduced, equivalent ratios can be used to solve a wide variety of problems.

Students will use the structure of a ratio table to find equivalent ratios, which in turn are used to solve real-life applications. Various operations are used to create ratio tables.

Once students have a good understanding of ratios, and can solve a variety of ratio problems using a tape diagram or a ratio table, rates are introduced. Students begin by graphing ratios in the first quadrant and recognizing that there is a constant rate at which the line is increasing.

Rates, unit rates, and converting measures complete the unit. Converting rates, or simply converting a measurement to a different unit, integrates prior computational skills and ratio work.

### Priority Standards for unit:

- 6.RP.A.2 Understand the concept of a unit rate associated with a ratio, and describe the meaning of unit rate.
- 6.RP.A.1 Understand a ratio as a comparison of two quantities and represent these comparisons.
- 6.RP.A.3 Solve problems involving ratios and rates.
  - a) Create tables of equivalent ratios, find missing values in the tables and plot the pairs of values on the Cartesian coordinate plane.
  - b) Solve unit rate problems.
  - d) Convert measurement units within and between two systems of measurement.

### Supporting Standards for unit:

- ISTE-COMPUTATIONAL THINKER. 5: Students develop and employ strategies for understanding and solving problems in ways that leverage the power of technological methods to develop and test solutions.

Priority Standard	Unwrapped Concepts (Students need to know)	Unwrapped Skills (Students need to be able to do)	Bloom's Taxonomy Levels	Webb's DoK
6.RP.A.1	Understand a ratio as a comparison of two quantities and represent these comparisons	Understand	Understand	2

6.RP.A.2	Understand the concept of a unit rate associated with a ratio, and describe the meaning of unit rate	Understand	Understand	2
6.RP.A.3	Solve problems involving ratios and rates	Solve	Apply	3
6.RP.A.3.A	Create tables of equivalent ratios, find missing values in the tables and plot the pairs of values on the Cartesian coordinate plane.	Create	Create	4
6.RP.A.3.B	Solve unit rate problems.	Solve	Apply	3
6.RP.A.3.D	Convert measurement units within and between two systems of measurement	Convert	Understand	2

**Essential Questions:**

1. Which models are helpful in which situations?
2. How are models helpful in making comparisons?
3. Why might one representation be more useful than another?

**Enduring Understanding/Big Ideas:**

1. Usefulness of equivalent ratios/fractions for making predictions and scaling up and down. Usefulness of ratios as fractions for comparing terms of ratios. Usefulness of ratios as decimals for comparing ratios. A rate is a number that compares two quantities with different units. Comparing unit prices is helpful when you have to decide what to purchase. You can use rates to convert measurements from one unit to another.
2. Two ratios that are equivalent form a proportion. You can use tables, graphs, and equations to represent a proportional relationship and make comparisons. You can use a percent to represent a part to a whole ratio.
3. Being able to analyze a situation and communicate it effectively.

**Unit Vocabulary:**

## Big Ideas Chapter 3: Ratios and Rates

Standard	Topic & Section	Suggested # of Days	Learning Target	Success Criteria
6.RP.A.1 ISTE 5.a	3.1 Ratios	2 blocks	Understand the concepts of ratios and equivalent ratios.	<ol style="list-style-type: none"> <li>1. Write and interpret ratios using appropriate notation and language.</li> <li>2. Recognize multiplicative relationships in ratios.</li> <li>3. Describe how to determine whether ratios are equivalent.</li> <li>4. Name ratios equivalent to a given ratio.</li> </ol>
6.RP.A.3.A ISTE 5.a	3.2 Using Tape Diagrams	2 blocks	Use tape diagrams to model and solve ratio problems.	<ol style="list-style-type: none"> <li>1. Interpret tape diagrams that represent ratio relationships.</li> <li>2. Draw tape diagrams to model ratio relationships.</li> <li>3. Find the value of one part of a tape diagram.</li> <li>4. Use tape diagrams to solve ratio problems.</li> </ol>
6.RP.A.3.A	3.3 Using Ratio Tables	2 blocks	Use ratios tables to represent equivalent ratios and solve ratio problems.	<ol style="list-style-type: none"> <li>1. Use various operations to create tables of equivalent ratios.</li> <li>2. Use ratio tables to solve</li> </ol>

				ratio problems 3. Use ratio tables to compare ratios.
6.RP.A.3.A	3.4 Graphing Ratio Relationships	2 blocks	Represent ratio relationships in a coordinate plane.	<ol style="list-style-type: none"> <li>1. Create a plot ordered pairs from a ratio relationship</li> <li>2. Create graphs to solve ratio problems.</li> <li>3. Create graphs to compare ratios</li> </ol>
6.RP.A.2	3.5 Rates and Unit Rates	2 blocks	Understand the concept of a unit rate and solve rate problems.	<ol style="list-style-type: none"> <li>1. Find unit rates</li> <li>2. Use unit rates to solve rate problems.</li> <li>3. Use unit rates to compare rates</li> </ol>
6.RP.A.3.D	3.6 Converting Measures	2 blocks	Use ratio reasoning to convert units of measure.	<ol style="list-style-type: none"> <li>1. Write conversion facts as unit rates.</li> <li>2. Convert units of measure using ratio tables.</li> <li>3. Convert units of measure using conversion factors.</li> <li>4. Convert rates using conversion factors.</li> </ol>

## Unit 4: Percents

**Subject:** Mathematics

**Grade:** 6th Grade

**Name of Unit:** Percents

**Length of Unit:** 7 blocks

**Overview of Unit:** A major goal of this chapter is to describe percents as another way of representing fractions and decimals. More specifically, because the term *percent* means *per one hundred*, you can write percents as fractions or decimals. The terminology and notation may be new to students but the concept is not.

The first two lessons examine the relationship between fractions and percents, and then decimals and percents. Mathematical language and models will be used to make these connections.

The chapter continues with a lesson on comparing and ordering the three representations of numbers. Help students further develop their number sense by working with number line representations of fractions and decimals. There are many online tools that may aid in this understanding.

The last lesson of the chapter is on solving percent problems. Tape diagrams are used to model the whole, the part, and the percent. Help students understand how the model is labeled, and how to use and interpret the model.

### Priority Standards for unit:

- 6.RP.A.3 Solve problems involving ratios and rates.
  - Solve percent problems.

### Supporting Standards:

- 6.NS.C.8 Extend prior knowledge to generate equivalent representations of rational numbers between fractions, decimals and percentages (limited to terminating decimals and /or benchmark fractions of  $\frac{1}{3}$  and  $\frac{2}{3}$ ).
- ISTE-COMPUTATIONAL THINKER.5: Students develop and employ strategies for understanding and solving problems in ways that leverage the power of technological methods to develop and test solutions.

Standard	Unwrapped Concepts (Students need to know)	Unwrapped Skills (Students need to be able to do)	Bloom's Taxonomy Levels	Webb's DOK
6.RP.A.3	Find a percent of a quantity and solve percent problems	Find	Understand	2
6.RP.A.3	Find a percent of a quantity and solve percent problems	Solve	Apply	3

**Essential Questions:**

1. What are percents? What is the value of having a common language for comparing ratios?
2. How is a fraction used to represent a percent?

**Enduring Understanding/Big Ideas:**

1. Percents are a common language for comparing ratios. Having a common language helps situations be compared more easily. For example, it is easier to compare 25% to 20 than to compare  $\frac{1}{4}$  to  $\frac{2}{5}$ .
2. A percent can be written as a fraction over 100, where 100 is the whole, (denominator) and the percent is the part, (numerator).

**Unit Vocabulary:**

<b>Academic Cross-Curricular Words</b>	<b>Content/Domain Specific</b>

				percents from least to greatest.
6.RP.A.3 ISTE 5.a	4.4 Solving Percent Problems	2 blocks	Find a percent of a quantity and solve percent problems.	<ol style="list-style-type: none"> <li>1. Represent percents of numbers using an equation, a ratio table, or a model.</li> <li>2. Find percents of numbers.</li> <li>3. Find the whole given a part and the percent</li> </ol>

## Unit 5: Algebraic Expressions and Properties

**Subject:** Mathematics

**Grade:** 6<sup>th</sup> Grade

**Name of Unit:** Algebraic Expressions and Properties

**Length of Unit:** 8 blocks

**Overview of Unit:** Students will write and evaluate algebraic expressions, use properties with algebraic expressions, and factor expressions.

Students used variable in prior courses, often in the context of finding the area or the perimeter of a geometric figure. Formulas were written as verbal models and then variables were introduced.

The order of operations, including exponents and grouping symbols, is extended to algebraic expressions.

In prior courses, students were introduced to the Commutative and Associative Properties. The Addition Property of Zero and the Multiplication Properties of Zero and One are presented in this unit. All the properties are shown with words, numbers, and variables.

Students have some experience using the Distributive Property with numerical expressions. Help students recognize that factoring is represented in the Distributive Property.

### Priority Standards for unit:

- 6.EE1.A.2 Create and evaluate expressions involving variables and whole number exponents
  - Identify parts of an expression using mathematical terminology
  - Evaluate expressions at specific values of the variables.
  - Evaluate non-negative rational number expressions
  - Write and evaluate algebraic expressions
  - Understand the meaning of the variable in the context of the situation

### Supporting Standards for unit:

- ISTE-COMPUTATIONAL THINKER. 5: Students develop and employ strategies for understanding and solving problems in ways that leverage the power of technological methods to develop and test solutions.

Priority Standard	Unwrapped Concepts (Students need to know)	Unwrapped Skills (Students need to be able to do)	Bloom's Taxonomy Levels	Webb's DOK
6.EE1.A.2	Evaluate algebraic expressions given values of their variables	Evaluate	Evaluate	4
6.EE1.A.2	Write algebraic expressions and solve problems involving algebraic expressions.	Solve	Apply	3

**Essential Questions:**

1. What is an advantage of using mathematical expressions?
2. What are properties? How are properties useful?

**Enduring Understanding/Big Ideas:**

1. When you don't know all of the information, a numerical expression isn't enough and you need to write an algebraic expression
2. They allow you to rewrite expression in different ways. Rewriting an expression allows you to see the problem in a new way, which can sometimes help you see a solution path, or a new way of looking at the problem

**Unit Vocabulary:**

--	--	--	--	--

## Unit 6: Equations

**Subject:** Mathematics

**Grade:** 6<sup>th</sup> Grade

**Name of Unit:** Equations

**Length of Unit:** 7 blocks

**Overview of Unit:** The algebra strand continues in this unit as students learn to write and solve equations in one variable with nonnegative rational-number solutions. Students will also analyze the quantitative relationship between independent and dependent variables.

You want students to understand that performing the inverse operation allows them to solve the equation, with the exception of multiplying by the reciprocal being a more efficient method for solving an equation with a fractional coefficient.

Students will also write and graph equations in two variables. Students will graph the equation by first creating a table of solutions to the equation and then plotting the ordered pairs.

### Priority Standards for unit:

- 6.EE1.B.4 Use substitution to determine whether a given number in a specified set makes a one-variable equation or inequality true.
- 6.EE1.B.5 Understand that if any solution exist, the solution set for an equation or inequality consists of values that makes the equation or inequality true.
- 6.EE1.B.6 Write and solve equations using variables to represent quantities, and understand the meaning of the variable in the context of the situation.
- 6.EE1.B.7 Solve one-step linear equations in one variable involving non-negative rational numbers.
- 6.EE1.C.9 Identify and describe relationships between two variables that change in relationships to one another.
  - Write an equation to express one quantity, the dependent variable, in terms of the other quantity, the independent variable.

### Supporting Standards for unit:

- ISTE-COMPUTATIONAL THINKER. 5: Students develop and employ strategies for understanding and solving problems in ways that leverage the power of technological methods to develop and test solutions.

Priority Standard	Unwrapped Concepts (Students need to know)	Unwrapped Skills (Students need to be able to do)	Bloom's Taxonomy Levels	Webb's DOK
6.EE1.B.4	Use substitution to determine whether a given number in a specified set makes a one-variable equation or inequality true.	Determine	Analyze	4

6.EE1.B.5	Understand that if any solution exist, the solution set for an equation or inequality consists of values that makes the equation or inequality true.	Understand	Understand	3
6.EE1.B.6	Write and solve equations using variables to represent quantities, and understand the meaning of the variable in the context of the situation.	Write and Solve	Apply	3
6.EE1.B.7	Solve one-step linear equations in one variable involving non-negative rational numbers.	Solve	Apply	3
6.EE1.C.9	Identify and describe relationships between two variables that change in relationships to one another.	Write	Apply	3

**Essential Questions:**

1. How are mathematical equations used to represent real-world situations?
2. How can you represent relationships that are equal?
3. How are two-variable relationships different from one-variable relationships? When do you need two variables?

**Enduring Understanding/Big Ideas:**

1. A lot of real world situation can be represented with numbers.
2. You can represent a relationship with a verbal description, math symbols, or you can draw a diagram. You can write an equation to represent an equal relationship.
3. Sometimes there are two unknown quantities in a problem situation, so you need two variables. In a two variable situation, a change in one quantity affects the other quantity. You can solve an equation with one variable by undoing operation, and the answer is usually a single number. Equations with two variables have many solutions, and you can find one of the solutions by substituting a value for one of the variables and solving for the other variable.

**Unit Vocabulary:**

## Unit 7: Area, Surface Area, and Volume

**Subject:** Mathematics

**Grade:** 6<sup>th</sup> Grade

**Name of Unit:** Area, Surface Area, and Volume

**Length of Unit:** 8 blocks

**Overview of Unit:** Students will extend measurement concepts in this unit by deriving various area, surface area, and volume formulas.

The three types of measurement associated with two- and three-dimensional figures each have particular units associated with them. As you work through the chapter, be intentional in mentioning the units and ask what a square centimeter looks like or a cubic foot? What do students visualize when they hear these words?

Each of the area formulas can be derived from the formula of the area of a rectangle. You want students to make sense of the formulas, not just memorize them.

Students apply their understanding of area when they find the surface area of prisms and pyramids. The approach used to develop an understanding of surface area is to recognize the two-dimensional net that can be folded to form the prism or the pyramid. All of the faces will be polygons. It is very important that the students have the tactile experience of drawing, cutting, and folding nets.

### Priority Standards for unit:

- 6.GM.A.1 Find the area of polygons by composing or decomposing the shapes into rectangles or triangles
- 6.GM.A.4 Solve problems using nets.
  - Represent three-dimensional figures using nets made up of rectangles and triangles.
  - Use nets to find the surface area of three-dimensional figures whose sides are made up of rectangles and triangles.
- 6.GM.A.2 Find the volume of right rectangular prisms.
  - Understand that the volume of a right rectangular prism can be found by filling.
  - Apply  $V=l * w * h$  and  $V= Bh$  to find the volume of right rectangular prisms.

### Supporting Standards for unit:

- ISTE-COMPUTATIONAL THINKER. 5: Students develop and employ strategies for understanding and solving problems in ways that leverage the power of technological methods to develop and test solutions.

Priority Standard	Unwrapped Concepts (Students need to know)	Unwrapped Skills (Students need to be able to do)	Bloom's Taxonomy Levels	Webb's DOK
6.GM.A.1	Find the area of polygons by composing or decomposing the shapes into rectangles or triangles	Compose, Decompose	Create	5

6.GM.A.4	<p>Solve problems using nets.</p> <p>a. Represent three-dimensional figures using nets made up of rectangles and triangles.</p> <p>b. Use nets to find the surface area of three-dimensional figures whose sides are made up of rectangles and triangles.</p>	Solve	Apply	3
6.GM.A.2	<p>Find the volume of right rectangular prisms.</p> <p>a. understand that the volume of a right rectangular prism can be found by filling.</p> <p>b. Apply <math>V=l * w * h</math> and <math>V= Bh</math> to find the volume of right rectangular prisms.</p>	Apply	Apply	3

**Essential Questions:**

1. How can you rearrange shapes to makes other shapes? Why would you want to?
2. If you want to compare boxes, what do you compare?

**Enduring Understanding/Big Ideas:**

1. Making connections between shapes and their area formulas. The ability to decompose shapes into basic polygons
2. Utilizing nets of three-dimensional figures to finding surface areas and then to finding volumes. Breaking three-dimensional figures into surface pieces for finding surface areas.

## Unit 8: Integers, Number Lines, and the Coordinate Plane

**Subject:** Mathematics

**Grade:** 6<sup>th</sup> Grade

**Name of Unit:** Integers, Number Lines, and the Coordinate Plane

**Length of Unit:** 11 blocks

**Overview of Unit:** This unit brings together and extends two areas of previous study, the number system and work with equations. Students' understanding of decimals and fractions is applied to negative quantities and their understanding of equations is applied to inequalities.

Understanding that negative numbers can represent quantities that have opposite directions or values is more difficult and representing negative numbers on a number line is often the most challenging.

Temperatures and elevations are familiar applications for students and are both typically represented in a vertical form. When rational numbers are represented on a horizontal number line, students can become very confused.

Absolute value is introduced, defining  $|a|$  as the distance between the number and zero.

Students have previously learned to plot ordered pairs in the first quadrant and with the introduction of negative numbers students can now plot in all four quadrants.

It is important for students to recognize that inequalities such as  $x < 4$ , have an infinite number of solutions that can be represented on a number line.

### Priority Standards for unit:

- 6.NS.C.5 Use positive and negative numbers to represent quantities.
- 6.NS.C.6 Locate a rational number as a point on the number line. Locate rational numbers on a horizontal or vertical number line.
- 6.NS.C.7 Understand that the absolute value of a rational number is its distance from 0 on the number line.
- 6.GM.A.3 Solve problems by graphing points in all four quadrants of the Cartesian coordinate plane.
- 6.EE1.B.4 Use substitution to determine whether a given number in a specified set makes a one-variable equation or inequality true.
- 6.EE1.B.5 Understand that if any solution exist, the solution set for an equation or inequality consists of values that makes the equation or inequality true.
- 6.EE1.B.8 Recognize that inequalities may have infinitely many solutions.
  - Write an inequality of the forms  $X > c$ ,  $X < C$ ,  $X \geq C$  or  $X \leq C$  to represent a constraint or condition.
  - Graph the solution set of an inequality.

### Supporting Standards for unit:

- ISTE-COMPUTATIONAL THINKER.5: Students develop and employ strategies for understanding and solving problems in ways that leverage the power of technological methods to develop and test solutions.

<b>Priority Standard</b>	<b>Unwrapped Concepts (Students need to know)</b>	<b>Unwrapped Skills (Students need to be able to do)</b>	<b>Bloom's Taxonomy Levels</b>	<b>Webb's DOK</b>
6.NS.C.5	Use positive and negative numbers to represent quantities.	Use	Apply	3
6.NS.C.6	Locate a rational number as a point on the number line. a. Locate rational numbers on a horizontal or vertical number line.	Locate	Knowledge	1
6.NS.C.7	Understand that the absolute value of a rational number is its distance from 0 on the number line.	Understand	Understand	2
6.GM.A.3	Solve problems by graphing points in all four quadrants of the Cartesian coordinate plane.	Solve	Solve	3
6.EE1.B.4	Use substitution to determine whether a given number in a specified set makes a one-variable equation or inequality true.	Determine	Analyze	4
6.EE1.B.5	Understand that if any solution exist, the solution set for an equation or inequality consists of values that makes the equation or inequality true.	Understand	Understand	2
6.EE1.B.8	Recognize that inequalities may have infinitely many solutions.	Recognize and Graph	Create	4

**Essential Questions:**

1. What are integers?
2. What do integers allow you to do that whole numbers do not?
3. What does it mean for one negative number to be greater than another negative number?
4. How can you use that information?
5. How can you express the distance of any number from zero?
6. When might you might need to know the distance from zero?
7. How is a number line related to the coordinate plane?
8. How are integers used within a coordinate plane?
9. How are integers used to express distances?

**Enduring Understanding/Big Ideas:**

1. Integers are the set of positive whole numbers, their opposites and zero.
2. Integers allow us to represent that are both greater than and less than zero. Whole numbers can only represent positive numbers and zero.
3. As with positive numbers, the greater negative number is located farther to the right on a number line.
4. This allows you to use a number line to compare and order integers so you can determine which is the greater or least.
5. The absolute value of any number expresses the distance of the number from zero.
6. The absolute value allows you to compare numbers on either side of zero to find which is closest to or farthest from zero.
7. The coordinate plane is formed by two number lines, one vertical and one horizontal, that intersect at the origin.
8. Pairs of integers, called coordinates, are used to describe the locations of points on the coordinate plane.
9. Positive integers and zero are used to measure distance. Negative integers can't be used to measure distances, but they can be used to indicate a position relative to another location. From 0 is greater. When comparing two negative numbers, the number closer to 0 is greater.

**Unit Vocabulary:**

<b>Academic Cross-Curricular Words</b>	<b>Content/Domain Specific</b>

6.GM.A.3 ISTE 5.a	8.6 Polygons in the Coordinate Plane	1 Block	Draw polygons in the coordinate plane and find distances between points in the coordinate plane.	<ol style="list-style-type: none"> <li>Draw polygons in the coordinate plane.</li> <li>Find distances between points in the coordinate plane with the same x-coordinates or the same y-coordinates.</li> <li>Find horizontal and vertical side lengths of polygons in the coordinate plane</li> <li>Draw polygons in the coordinate plane to solve real-life problems.</li> </ol>
6.EE1.B.8	8.7 Writing and Graphing Inequalities	2 Blocks	Write inequalities and represent solutions of inequalities on number lines.	<ol style="list-style-type: none"> <li>Write word sentences as inequalities.</li> <li>Determine whether a value is a solution of an inequality.</li> <li>Graph the solutions of inequalities.</li> </ol>
6.EE1.B.4, 6.EE1.B.5 6.EE1.B.7	8.8 Solving Inequalities	2 Blocks	Write and solve inequalities.	<ol style="list-style-type: none"> <li>Apply the properties of inequality to generate equivalent inequalities.</li> <li>Solve inequalities using addition or subtraction.</li> <li>Solve inequalities using multiplication or division.</li> <li>Write and solve inequalities that represent real-life problems.</li> </ol>

## Unit 9: Statistical Measures

**Subject:** Mathematics

**Grade:** 6<sup>th</sup> Grade

**Name of Unit:** Statistical Measures

**Length of Unit:** 6 blocks

**Overview of Unit:** Students need to understand what a statistical question is. “What video game did you play last night?” is not a statistical question. “What video games did students in your math class play last night?” is a statistical question about categorical data. You expect a variety of answers. “How many video games were played by students in your math class last night?” is a statistical question about numerical data. You expect a variety of answers and you are interested in the *distribution* and *tendency* of those answers.

Data collected can be described by its center spread, and overall shape. A measure of center summarizes all of the values in a data set with a single number and describes the typical value of a data set. Measures of center include mean, median, and mode. A measure of variation describes the variability of a data set with a single number. Measurement of variation include range, interquartile range, and the mean absolute deviation.

Overarching goals of the chapter are for students to develop an understanding of statistical variability and to be able to summarize and describe the distribution of a data set.

### Priority Standards for unit:

- 6.DSP.A.1 Recognize a statistical question as one that anticipates variability in the data related to the question and accounts for it in the answer.
- 6.DSP.A.2 Understand that a set of data collected to answer a statistical question has a distribution which can be described by its center, spread and overall shape.
- 6DSP.A.3 Recognize that a measure of center for a numerical data set summarizes all of its values with a single number, while a measure of variation describes how its values vary from a single number.
- 6.DSP.B.5 Summarize numerical data sets in relation to the context.
  - Report the number of observations.
  - Describe the nature of the attribute under investigation, including how it was measured and its units of measurement.
  - Give quantitative measures of center (median and/or mean) and variability (interquartile range and/or mean absolute deviation), as well as describing any overall pattern and any striking deviations from the overall pattern with reference to the context of the data.
  - Analyze the choice of measures of center and variability based on the shape of the data distribution and/or the context of the data.

### Supporting Standards for unit:

- ISTE-COMPUTATIONAL THINKER. 5: Students develop and employ strategies for understanding and solving problems in ways that leverage the power of technological methods to develop and test solutions.

<b>Priority Standard</b>	<b>Unwrapped Concepts (Students need to know)</b>	<b>Unwrapped Skills (Students need to be able to do)</b>	<b>Bloom's Taxonomy Levels</b>	<b>Webb's DOK</b>
6.DSP.A.1	Recognize a statistical question as one that anticipates variability in the data related to the question and accounts for it in the answer.	Recognize	Knowledge	1
6.DSP.A.2	Understand that a set of data collected to answer a statistical question has a distribution which can be described by its center, spread and overall shape.	Understand	Understand	2
6DSP.A.3	Recognize that a measure of center for a numerical data set summarizes all of its values with a single number, while a measure of variation describes how its values vary from a single number.	Describe	Knowledge	1
6DSP.A.5	Summarize numerical data sets in relation to the context.	Summarize	Understand	2

**Essential Questions:**

1. Why would you ask a statistical question?
2. How do you use measures of center?

**Enduring Understanding/Big Ideas:**

1. Statistical questions are questions that anticipate variability.
2. Use measure of center to summarize all of the values in a data set with a single number, and use measures of variation to summarize how all the values in a data set vary with a single number.

**Unit Vocabulary:**

<b>Academic Cross-Curricular Words</b>	<b>Content/Domain Specific</b>

6.DSP.A.1	9.1 Introduction to Statistics	1 Block	Identify statistical questions and use data to answer statistical questions.	<ol style="list-style-type: none"> <li>1. Recognize questions that anticipate a variety of answers.</li> <li>2. Construct and interpret a dot plot.</li> <li>3. Use data to answer a statistical question.</li> </ol>
6.DSP.A.2	9.2 Mean	$\frac{1}{2}$ Block	Find and interpret the mean of a data set.	<ol style="list-style-type: none"> <li>1. Explain how the mean summarizes a data set with a single number.</li> <li>2. Find the mean of a data set.</li> <li>3. Use the mean of a data set to answer a statistical question.</li> </ol>
6.DSP.A.3	9.3 Measures of Center	$\frac{1}{2}$ Block	Find and interpret the median and mode of a data set.	<ol style="list-style-type: none"> <li>1. Explain how the median and mode summarize a data set with a single number.</li> <li>2. Find the median and mode of a data set.</li> <li>3. Explain how changes to a data set affect the measures of center.</li> <li>4. Use a measure of center to answer a statistical question.</li> </ol>
6.DSP.B.5	9.4 Measures of Variation	1 Block	Find and interpret the range and interquartile range of a data set.	<ol style="list-style-type: none"> <li>1. Explain how the range and interquartile range describe the variability of a data set with a single number.</li> </ol>

				<ol style="list-style-type: none"> <li>2. Find the range and interquartile range of a data set.</li> <li>3. Use the interquartile range to identify outliers.</li> </ol>
6.DSP.B.5	9.5 Mean Absolute Deviation	1 Block	Find and interpret the mean absolute deviation of a data set.	<ol style="list-style-type: none"> <li>1. Explain how the mean absolute deviation describes the variability of a data set with a single number.</li> <li>2. Find the mean absolute deviation of a data set.</li> <li>3. Compare data sets using the mean absolute deviation to draw conclusions.</li> </ol>

## Unit 10: Data Displays

**Subject:** Mathematics

**Grade:** 6<sup>th</sup> Grade

**Name of Unit:** Data Displays

**Length of Unit:** 11 blocks

**Overview of Unit:** Students will think about the different ways in which some data sets can be displayed.

Students should have a familiarity with bar graph, dot plots, line graphs, and pictographs. In this unit, they will extend their understanding of the data displays to stem-and-leaf plots, histograms, and box-and-whisker plots.

In choosing a type of data display, students must first consider the type of data they have and what would be an appropriate way to display it. The number of hours of sleep on seven consecutive nights could be displayed in a dot plot or a bar graph, but there would likely be little to describe if it were plotted using any of the new data displays in this chapter. The height (in inches) of students in a class could be plotted in any of the displays.

### Priority Standards for unit:

- 6.DSP.B.4 Display and interpret data.
  - Use dot plots, histograms and box plots to display and interpret numerical data.
  - Create and interpret circle graphs.
- 6.DSP.B.5 Summarize numerical data sets in relation to the context.
  - Report the number of observations.
  - Describe the nature of the attribute under investigation, including how it was measured and its units of measurement.
  - Give quantitative measures of center (median and/or mean) and variability (interquartile range and/or mean absolute deviation), as well as describing any overall pattern and any striking deviations from the overall pattern with reference to the context of the data.
  - Analyze the choice of measures of center and variability based on the shape of the data distribution and/or the context of the data.

### Supporting Standards for unit:

- ISTE-COMPUTATIONAL THINKER. 5: Students develop and employ strategies for understanding and solving problems in ways that leverage the power of technological methods to develop and test solutions.

Priority Standard	Unwrapped Concepts (Students need to know)	Unwrapped Skills (Students need to be able to do)	Bloom's Taxonomy Levels	Webb's DOK
6.DSP.B.4	Display and interpret data.	Create	Create	4

6.DSP.B.5	Summarize numerical data sets in relation to the context.	Summarize	Analyze	3
-----------	---	-----------	---------	---

**Essential Questions:**

1. What kinds of data displays show and hide how things vary?
2. When do you use each kind?
3. What can you do with data to make it more useful?
4. How does what you are looking for determine how data is best used and represented?

**Enduring Understanding/Big Ideas:**

1. A dot plot can show you cluster, gaps, and data that stray. It shows you individual dots to represent each value in a data set. A histogram can show you the general distribution of data that are grouped in intervals. A box plot can show you the general distribution of data in relation to five boundary points.
2. Analyzing the situations and determining the effectiveness of your data display will help guide you on the most effective way to present your data.
3. Mean and median are measures of center. Range, interquartile range, and mean absolute deviation are measures of variation.
4. Knowing which model best describes the different measures of center will determine the display that will be most effective to use.

**Unit Vocabulary:**

# Unit of Study Terminology

**Appendices:** All Appendices and supporting material can be found in this course's shell course in the District's Learning Management System.

**Assessment Leveling Guide:** A tool to use when writing assessments in order to maintain the appropriate level of rigor that matches the standard.

**Big Ideas/Enduring Understandings:** Foundational understandings teachers want students to be able to discover and state in their own words by the end of the unit of study. These are answers to the essential questions.

**Engaging Experience:** Each topic is broken into a list of engaging experiences for students. These experiences are aligned to priority and supporting standards, thus stating what students should be able to do. An example of an engaging experience is provided in the description, but a teacher has the autonomy to substitute one of their own that aligns to the level of rigor stated in the standards.

**Engaging Scenario:** This is a culminating activity in which students are given a role, situation, challenge, audience, and a product or performance is specified. Each unit contains an example of an engaging scenario, but a teacher has the ability to substitute with the same intent in mind.

**Essential Questions:** Engaging, open-ended questions that teachers can use to engage students in the learning.

**Priority Standards:** What every student should know and be able to do. These were chosen because of their necessity for success in the next course, the state assessment, and life.

**Supporting Standards:** Additional standards that support the learning within the unit.

**Topic:** These are the main teaching points for the unit. Units can have anywhere from one topic to many, depending on the depth of the unit.

**Unit of Study:** Series of learning experiences/related assessments based on designated priority standards and related supporting standards.

**Unit Vocabulary:** Words students will encounter within the unit that are essential to understanding. Academic Cross-Curricular words (also called Tier 2 words) are those that can be found in multiple content areas, not just this one. Content/Domain Specific vocabulary words are those found specifically within the content.

## **Symbols:**

 This symbol depicts an experience that can be used to assess a student's 21st Century Skills using the rubric provided by the district.

 This symbol depicts an experience that integrates professional skills, the development of professional communication, and/or the use of professional mentorships in authentic classroom learning activities.
